- Preview any Previous Class Video**
- Playback Any Video...Any Time**
- Video Assistance for Personal Trainers**
- Audio Library & Player**
- Cycling Videos Library**
- MediaManagerNetwork™**
- A Social Network for Instructors**

MediaManagerNetwork™ by SupremeAudio™ enables better utilization of your cycling & group exercise rooms. Custom-designed to meet the unique needs of fitness industry customers! It can turn a "much-of-the-day vacant room" into a "constant-use room".

Makes a cycle studio come to life with realistic landscape videos, movie clips, cycle rides, competitive cycling events, and more. It can record specialty subscriptions from other vendors for Group Exercise classes.

Because certain rooms such as stationary cycle rooms have fixed equipment on the floor, they can only be used for Spinning™. Therefore, we've created a video recording system to enable you to get more use out of group fitness and stationary cycle rooms...increasing use and profits!

Stationary Cycle or Group Exercise classes can be recorded with the ceiling or wall mounted camera placed above the exercise floor aimed at the instructor.

The MediaManagerNetwork™ computer audio rack, will store all recorded classes in the library for future selection and playback.

LCD control panel: Waterproof touchscreen LCD control panel for the instructor to use. The graphics (right) show some of the screens available. The instructor logs in and describes the class to be recorded using the Data Input screen. Hit the RECORD button and then enjoy teaching the class. Overhead camera is always live for easier viewing.

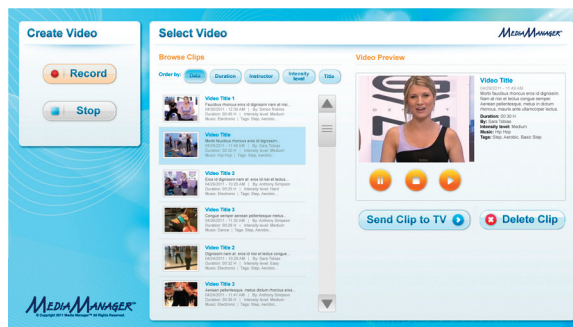

Easy-to-use Screens Data Entry & Record Screen: The instructor enters key data such as Instructor Name, Title, Duration & Tempo for the class to be recorded.

That information is Saved and the Video recording will begin. After the class, the instructor hits the Save button and the video is added to the video library.

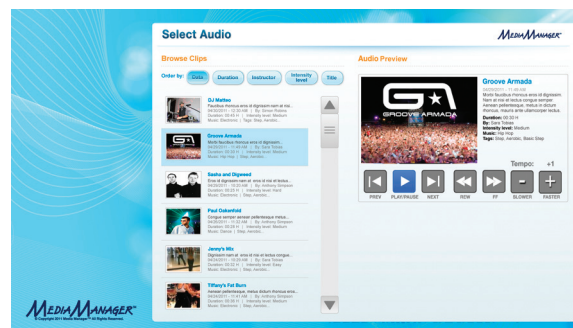

Preview & Play Screen: When no instructor is assigned for that time slot, gym staff can go to the video library preview any video and select the video they wish to send to the large LCD screens around the room for all to enjoy.

Select Audio & Preview Screen: Load songs into the Audio Library from any outside source. Play them back through the sound system.

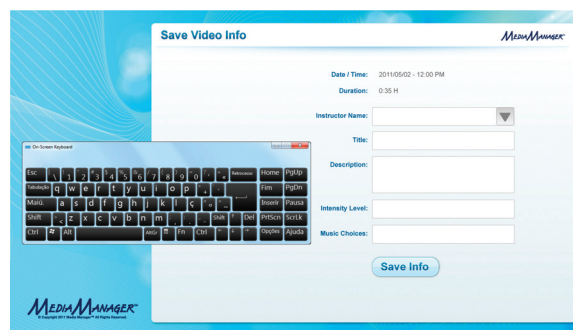

Cycling Videos Online Screen: There are three samples of HD videos of competitive bike races through picturesque countryside. Critical speed, incline and elapsed time data are displayed right on the screen. Class members feel they
