

# Paint On Screens & Projection Screens

## PAINT ON SCREEN®

### Single-Coat Projection Screen Paint

Paint On Screen® is the leading single-coat projection screen paint that allows anyone to paint a screen onto any surface. In less than an hour you can paint a vivid 2D or a brilliant silver 3D screen with picture perfect 1080p HD clarity.

Paint On Screen® uses a specialized and highly refined silver metallic base to ensure pixel clarity, sharpness and uniform brightness. Our silver is known for being the most contrast-boosting and color-enhancing material of any screen type.

Paint On Screen® is very easy to apply:

It is designed to be applied just like any other interior paint. The screen can be used immediately after application. Care should be taken to ensure a smooth screen surface. A smoother screen, free of defects, provides the sharpest image. Paint On Screen® will take 24 hours to cure to perfection, but can be used immediately.

### Why Is Paint On Screen® A Better Solution?

- has superior contrast and visual depth compared to vinyl or material screens.
- is a patent pending formulation of compounds developed through extensive research.
- provides flat spectral response eliminating image color shift.
- is formulated on an absolute neutral gray scale.
- eliminates 4:3, 16:9, 1.78:1, 1.85:1 and 2.35:1 masking problems.
- can clearly represent pixel resolution up to 4K Ultra HD in under 80" diagonal.

- costs hundreds less than any other solution.
- is very easy to apply. One application with no special mixing or tools.
- lasts a lifetime, and can be wiped clean and painted over if needed.
- carries a 100% satisfied, no questions asked, guarantee

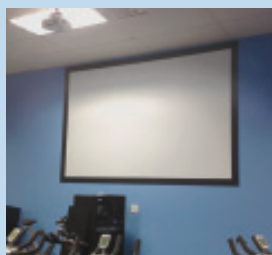

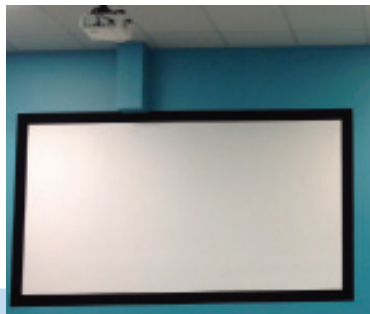

**1 year limited warranty**
