## SPA-664 "The Breeze"

### ADJUSTING THE SPA BREEZE MICROPHONE

The SPA Breeze microphone is made to adjust to all head sizes. The adjustment strap can be pushed all the way to the back of the headset for larger heads or pushed forward to accommodate smaller heads. To adjust the microphone strap for the smallest heads, you will actually pull the strap forward so that it is at an angle, not straight across. You can also bend the frame of the headset without hurting the microphone but usually this is not necessary if you pull the strap far enough forward.

The Breeze microphone also has a much higher gain (volume) than most other wireless microphone systems. This might require that you turn the microphone volume down on your mixer and also use less volume on the actual Breeze 600 receiver.

If you need any assistance with adjusting the microphone or your sound system to use the Breeze successfully, please do not hesitate to give us a call.

**WARRANTY SERVICE:** If your SupremeProAudio microphone should ever need repair, please call us at 1-800-213-3515 or 1-603-876-3636 for a *Return Authorization Number*. When returning the microphone for repair, please make sure that there is adequate packing material inside the box to prevent shipping damage. You are responsible for proper shipping.
